INTELLIGENT CARE

Pharmacy Connect

The gap between pharmacy and care team is where medication errors happen.

Every day, caregivers in senior living depend on accurate, timely medication records to keep residents safe. When that information travels by fax, phone, or manual entry — mistakes happen. And in senior living, the stakes are high.

Seniors taking multiple medications face an elevated risk from medication errors. With residents averaging 13 concurrent medications, the risk isn't hypothetical — it's a daily workflow problem.
